

PointSAT: direct geometric constructions and search

Published 23-point example

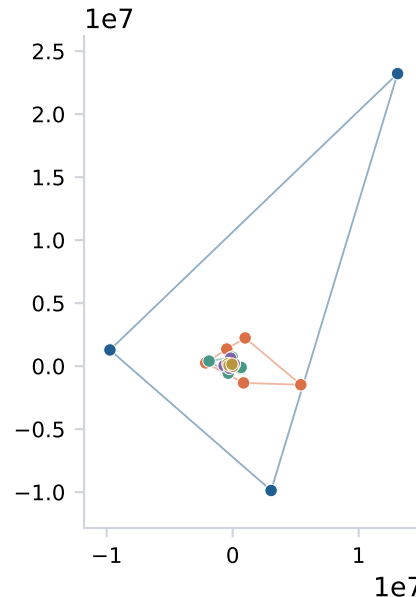

23 points · 672×566 integer grid
PointSAT paper, Figure 1

Direct geometric refinement

23 points · 349×346 integer grid
Published seed → small-grid repair → compaction

22 points grown geometrically

22 points · 22829276×33087356 integer grid
Overmars growth + candidate-pool replacements

Every panel checked by exhaustive subset enumeration with exact integer determinants. Colors identify convex hull layers.
