

Examples of the three allowed interior counts

These are examples from the same 19-point configuration, not separate solutions.

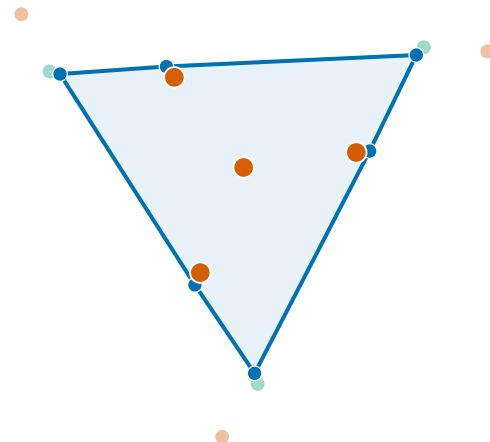

1 interior point

2 interior points

4 interior points

Blue: chosen convex hexagon Orange: its interior points Faint dots: other inner points

The three outer points are outside every displayed hexagon and are omitted from these enlarged views.

Some angles and interior gaps are extremely small; inclusion and strict convexity are certified exactly, not inferred from the drawing.
