

19 points: no convex hexagon with 0 or 3 interior points

Exact 120° rotational symmetry: six triples and the center

Full configuration

Enlarged center: 16 inner points

● 1-3 ● 4-6 ● 7-9 ● 10-12 ● 13-15 ● 16-18 ● 19 (center)

Colors identify rotational orbits; the dashed box is enlarged at right.

28 convex hexagons: 15 contain 1 point · 12 contain 2 points · 1 contains 4 points

All 969 triples and 27,132 six-point subsets checked exactly in $\mathbb{Q}(\sqrt{3})$. Equal x/y scale within each panel.
